## Create traffic management plans in a couple of clicks

### Plan

Plan and publish all types of traffic management intervention for roadworks, public events and incidents.

### Coordinate

Meet permit scheme coordination requirements with auto-generated TTROs, and facilitate cooperation and collaboration.

### Share

Share planned disruptions to road users via the one.network map, social media and major sat-nav services.

Plan, communicate and analyse every road event

Required Modules: one.network Premium Map.

# one.network: Traffic Management

Our market leading traffic management, planning and communication tool

## How it helps

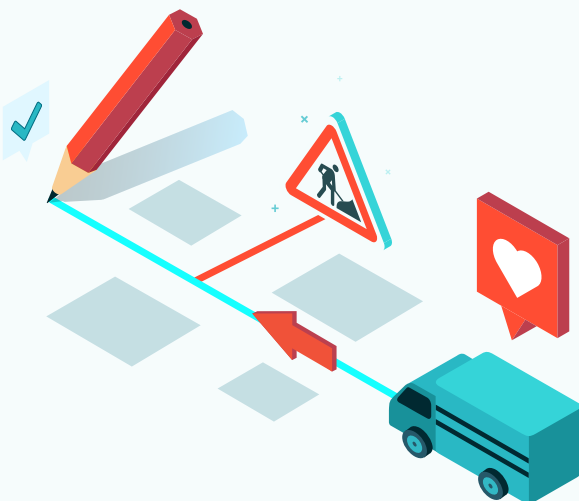

Before we introduced Traffic Management to the market, road closure orders were often confined to a paper exercise, the public being notified via adverts in local newspapers. Now, our solution is used by almost every highway authority in Britain to communicate planned disruptions to road users and highway industry stakeholders.

With Traffic Management, users can:

- **Plan**, manage and coordinate works from a single, simple digital tool.
- **Reduce** inbound enquiries from the public and minimise call centre costs by sharing all essential information with the public in real-time.
- **Ensure** permit scheme coordination requirements are met and handle all TTRO documents in one place.
- **Access** a single source of truth of everything happening on the highways to support planning and coordination.

## Features

- Map-based dashboard to create traffic management plans.
- The ability to share traffic management plans with the public in real-time via the one.network map, social media, embedded maps and major-sat nav services including TomTom, Google, Apple, Waze and Here.
- Automatic TTRO document generator.
- Option to set up email alerts about works and disruptions for key stakeholders.

Plan, communicate and analyse every road event

Required Modules: one.network Premium Map.
